Propositional Logics 3rd edition Richard L Epstein,2018-11-05 This book presents the history, philosophy, and mathematics of the major systems of propositional logic. Classical logic, modal logics, many-valued logics, intuitionism, paraconsistent logics, and dependent implication are examined in separate chapters. Each begins with a motivation in the originators' own terms, followed by the standard formal semantics, syntax, and completeness theorem. The chapters on the various logics are largely self-contained so that the book can be used as a reference. An appendix summarizes the formal semantics and axiomatizations of the logics. The view that unifies the exposition is that propositional logics comprise a spectrum: as the aspect of propositions under consideration varies, the logic varies. Each logic is shown to fall naturally within a general framework for semantics. A theory of translations between logics is presented that allows for further comparisons, and necessary conditions are given for a translation to preserve meaning. For this third edition the material has been re-organized to make the text easier to study, and a new section on paraconsistent logics with simple semantics has been added which challenges standard views on the nature of consequence relations. The text includes worked examples and hundreds of exercises, from routine to open problems, making the book with its clear and careful exposition ideal for courses or individual study.

Invertebrate Models of Natural and Drug-Sensitive Reward Robert Huber,Moirra van Staaden,2019-10-17 The rewarding properties of drugs depend on their capacity to activate appetitive motivational states. Because the mechanisms underlying natural reward are an important life-sustaining process and strongly conserved throughout metazoan evolution, invertebrate models provide a powerful complement to the mammalian systems traditionally used in addiction research. A

wide range of organizational complexity, combined with genetically manipulable, and relatively simple, accessible nervous systems, make invertebrates excellent models in which to explore general addiction principles. These include the role of natural reward systems in learning, the basic biological mechanisms of drug addiction, and the long-term effects of early drug exposure. The contributions to this e-book illustrate the current state of invertebrate addiction research. The chapters show that the reward circuits of invertebrate taxa are surprisingly sensitive to human drugs of abuse. Employing learning paradigms typically used in vertebrate studies (viz., conditioned place preference and operant, self-administration paradigms), invertebrates are shown to exhibit aspects of the addiction cycle from activational effects of common psychostimulants, sensitization with repeated application, to extinction, withdrawal, and reinstatement. This highlights the value of the comparative approach for both exploring conserved mechanisms underlying drug addiction and the utility of invertebrate models in seeking potential solutions.

The Cricket as a Model Organism Hadley Wilson Horch, Taro Mito, Aleksandar Popadić, Hideyo Ohuchi, Sumihare Noji, 2017-01-09 This book covers a broad range of topics about the cricket from its development, regeneration, physiology, nervous system, and behavior with remarkable recent updates by adapting the new, sophisticated molecular techniques including RNAi and other genome editing methods. It also provides detailed protocols on an array of topics and for basic experiments on the cricket. While the cricket has been one of the best models for neuroethological studies over the past 60 years, it has now become the most important system for studying basal hemimetabolous insects. The studies of *Gryllus* and related species of cricket will yield insight into evolutionary features that are not evident in other insect model systems, which mainly focus on holometabolous insects such as *Drosophila*, *Tribolium*, and *Bombyx*. Research on crickets and grasshoppers will be important for the development of pest-control strategies, given that some of the most notorious pests also belong to the order Orthoptera. At the same time, crickets possess an enormously high “food conversion efficiency”, making them a potentially important food source for an ever-expanding human population. This volume provides a comprehensive source of information as well as potential new applications in pest management and food production of the cricket. It will inspire scientists in various disciplines to use the cricket model system to investigate interesting and

innovative questions.

Current Research at Kultepe-Kanesh Levent Atici,Gojko Barjamovic,Andrew Fairbairn,Fikri Kulakoglu,2014-03-18

The material remains and the more than 23,500 cuneiform tablets unearthed at the site of Kultepe (ancient Kanesh) shed light on social, political, and economic aspects of the Middle Bronze age (ca. 2000-1700 years BC) in central Anatolia, but also in Upper Mesopotamia. The rich textual record provides ample information on a very sophisticated supraregional market economy, representing one of the best-documented historical cases of long-distance trade in the ancient world. Although the site was first excavated in 1893, followed by intermittent excavations between 1906 and 2005, modern scientific and interdisciplinary excavations have only been undertaken since 2006. The new scientific research at Kultepe-Kanesh has already begun amassing new data and providing us with a unique opportunity to generate new perspectives and to challenge previous models and assumptions about, for example, trade, colonialism, ethnicity, art, religious ideas, identity, and patterns of social, political, and economic organization in the Near East during the Middle Bronze Age. A primary goal of this special volume is to integrate the work of scholars in archaeology, archaeometry, bioarchaeology, geoarchaeology, and history to develop a new synthetic research paradigm for investigating issues of trade, colonialism, ethnicity, art, identity, and urbanization in the Near East in a unified fashion.
