**Experiment 116** Rena Mosteirín, 2021-10-20 Experiment 116 is a creative deformation of Shakespeare's Sonnet 116 using automatic machine translation. The poems begin in their original Shakespearean English and are then moved to another language, then another, then perhaps a third, and then back to English. In this way, the poem moves, the poem lives; it is reincarnated, reproduced, misunderstood, and mistaken. The essay that concludes the book explores how our practices of reading, writing, and revision can benefit from the use of free online translation tools. Experiment 116 invites readers to imagine translation errors and variants appearing during this process as a bridge between languages, striking unintentional emotional chords and producing creative depictions of life, as potentially codified by multi-lingual readers. In so doing, it enables a fugitive relation to idioms and stages a confrontation with multiple languages that function as the resources by which poets create, through language, cultural bridges. Experiment 116 asks its reader to consider automated algorithmic language translation as a site for the birth of a poetics of a global refugee idiolect.

**Quantum Chaos Y2K** Karl-Fredrik Berggren,Sven Åberg,2001-10-09 Quantum chaos is becoming a very wide field that ranges from experiments to theoretical physics and purely mathematical issues. In view of this grand span, Nobel Symposium 116 focused on experiments and theory, and attempted to encourage interplay between them. There was emphasis on the interdisciplinary character of the subject, involving a broad range of subjects in physics, including condensed matter physics, nuclear physics, atomic physics and elementary particle physics. The physics involved in quantum chaos has much in common with acoustics, microwaves, optics, etc., and therefore the symposium also covered aspects of wave chaos in this broader sense. The program was structured according to the following areas: manifestations of classical chaos in quantum systems; transport phenomena; quantal spectra in terms of periodic orbits; semiclassical and random matrix approaches; quantum chaos in interacting systems; chaos and tunneling; wave-dynamic chaos. This important book constitutes the proceedings of the symposium.
