*The Nine Hundred* Heather Dune Macadam, Caroline Moorehead, 2020-01-23 'Books such as this are essential: they remind modern readers of events that should never be forgotten' - Caroline Moorehead On March 25, 1942, nearly a thousand young, unmarried Jewish women boarded a train in Poprad, Slovakia. Filled with a sense of adventure and national pride, they left their parents' homes wearing their best clothes and confidently waving good-bye. Believing they were going to work in a factory for a few months, they were eager to report for government service. Instead, the young women-many of them teenagers-were sent to Auschwitz. Their government paid 500 Reichsmarks (about £160) apiece for the Nazis to take them as slave labour. Of those 999 innocent deportees, only a few would survive. The facts of the first official Jewish transport to Auschwitz are little known, yet profoundly relevant today. These were not resistance fighters or prisoners of war. There were no men among them. Sent to almost certain death, the young women were powerless and insignificant not only because they were Jewish-but also because they were female. Now, acclaimed author Heather Dune Macadam reveals their poignant stories, drawing on extensive interviews with survivors, and consulting with historians, witnesses, and relatives of those first deportees to create an important addition to Holocaust literature and women's history.

Readers of *Born Survivors* and *A Train Near Magdeburg* will devour the tragic tale of the first 999

women in Auschwitz concentration camp. This is the hauntingly resonant true story that everyone should know. On March 25, 1942, nearly a thousand young, unmarried Jewish women, many of them teenagers, boarded a train in Poprad, Slovakia. Believing they were going to work in a factory for a few months, they were eager to report for government service and left their parents' homes wearing their best clothes and confidently waving good-bye. Instead, the young women were sent to Auschwitz. Only a few would survive. Now acclaimed author Heather Dune Macadam reveals their stories, drawing on extensive interviews with survivors, and consulting with historians, witnesses, and relatives of those first deportees to create an important addition to Holocaust literature and women's history. "Intimate and harrowing. . . . This careful, sympathetic history illuminates an incomprehensible human tragedy." —Publishers Weekly "Against the backdrop of World War II, this respectful narrative presents a compassionate and meticulous remembrance of the young women profiled throughout. Recommended for all collections." —Library Journal "Staggering . . . profound. [Macadam's] book also offers insight into the passage of these women into adulthood, and their children, as 'secondhand survivors.'" —Gail Sheehy, New York Times bestselling author of *Passages and Daring: My Passages* "Heather Dune Macadam's 999 reinstates the girls to their rightful place in history." —Foreword Reviews "An important addition to the annals of the Holocaust, as well as women's history. Not everyone could handle such material, but Heather Dune Macadam is deeply qualified, insightful, and perceptive." —Susan Lacy, creator of the American Masters series and filmmaker "The story of these teenage girls is truly extraordinary. Congratulations to Heather Dune Macadam for enabling the rest of us to sit down and just marvel at how on earth they did it." —Anne Sebba, New York Times bestselling author of *Les Parisiennes* and *That Woman* "An important contribution to the literature on women's experiences." —Dr. Rochelle G. **Statistics for Mining Engineering** Jacek M. Czaplicki,2014-01-14 Many areas of mining engineering gather and use statistical information, provided by observing the actual operation of equipment, their systems, the development of mining works, surface subsidence that accompanies underground mining, displacement of rocks surrounding surface pits and underground drives and longwalls, amongst others. In addition, the actual modern machines used in surface mining are equipped with diagnostic systems that automatically trace all important machine parameters and send this information to the main producer's computer. Such data not only provide information on the technical properties of the machine but they also have a statistical character. Furthermore, all information gathered during stand and lab investigations where parts, assemblies and whole devices are tested in order to prove their usefulness, have a stochastic character. All of these materials need to be developed statistically and, more importantly, based on these results mining engineers must make decisions whether to undertake actions, connected with the further operation of the machines, the further development of the works, etc. For these reasons, knowledge of modern statistics is necessary for mining engineers; not only as to how statistical analysis of data should be conducted and statistical synthesis should be done, but also as to understanding the results obtained and how to use them to make appropriate decisions in relation to the mining operation. This book on statistical analysis and synthesis starts with a short repetition of probability theory and also includes a special section on statistical prediction. The text is illustrated with many examples taken from mining practice; moreover the tables required to conduct statistical inference are included.
