Handbook on Political Trust Sonja Zmerli, Tom W.G. van der Meer, 2017-01-27 Political trust - in government, parliament, or political parties - has taken centre stage in political science for more than half a century, reflecting ongoing concerns with the legitimacy and functioning of representative democracy. To provide scholars, students and policy makers with a tool to navigate through the complexity of causes and consequences of political trust, this Handbook offers an excellent overview of the conceptual, theoretical, methodological and empirical state of the art, complemented by accounts of regional

particularities, and authored by international experts in this field.

Bakir, 2019-05-06 This fourth volume of the landmark handbook focuses on the design, testing, and thermal management of 3D-integrated circuits, both from a technological and materials science perspective. Edited and authored by key contributors from top research institutions and high-tech companies, the first part of the book provides an overview of the latest developments in 3D chip design, including challenges and opportunities. The second part focuses on the test methods used to assess the quality and reliability of the 3D-integrated circuits, while the third and final part deals with thermal management and advanced cooling technologies and their integration.

Categorical Decomposition Techniques in Algebraic Topology Gregory Arone, John Hubbuck, Ran Levi, Michael Weiss, 2003-11-27 The book consists of articles at the frontier of current research in Algebraic Topology. It presents recent results by top notch experts, and is intended primarily for researchers and graduate students working in the field of algebraic topology. Included is an important article by Cohen, Johnnes and Yan on the homology of the space of smooth loops on a manifold M , endowed with the Chas-Sullivan intersection product, as well as an article by Goerss, Henn and Mahowald on stable homotopy groups of spheres, which uses the cutting edge technology of topological modular forms.

L2 Approaches in Several Complex Variables Takeo Ohsawa, 2015-09-28 The purpose of this monograph is to present the current status of a rapidly developing part of several complex variables, motivated by the applicability of effective results to algebraic geometry and differential geometry. Highlighted are the new precise results on the L_2 extension of holomorphic functions. In Chapter 1, the classical questions of several complex variables motivating the development of this field are reviewed after necessary preparations from the basic notions of those variables and of complex manifolds such as holomorphic functions, pseudoconvexity, differential forms, and cohomology. In Chapter 2, the L_2 method of solving the $\bar{\partial}$ -equation is presented emphasizing its differential geometric aspect. In Chapter 3, a refinement of the Oka-Cartan theory is given by this method. The L_2 extension theorem with an optimal constant is included, obtained recently by Z. Błocki and by Q.-A. Guan and X.-Y. Zhou separately. In Chapter 4, various results on the Bergman kernel are presented, including recent works of Maitani-Yamaguchi, Berndtsson, and Guan-Zhou. Most of these results are obtained by the L_2 method. In the last chapter, rather specific results are discussed on the existence and classification of certain holomorphic foliations and Levi flat hypersurfaces as their stable sets. These are also applications of the L_2 method obtained during these 15 years.

Red State Blues Matt Grossmann,2019-10-31 Despite winning control of twenty-four new state governments since 1992, Republicans have failed to enact policies that substantially advance conservative goals. This book offers the first systematic assessment of the geography and consequences of Republican ascendance in the states and yields important lessons for both liberals and conservatives.

Organic Compounds of Sulphur, Selenium, and Tellurium D H Reid,2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list

of Specialist Periodical Reports can be seen on the inside flap of this volume.
