HTML, CSS, Bootstrap, Php, Javascript and MySql Olga Maria Stefania Cucaro,2022-02-08 This book aims to initiate those who want to independently create a website, to the world of domains and programming linked to the web. The author conceived this work as a scientific work intended for educational and study use for all those who approach the study of client-side and server-side programming. In the first place the difference between the various domains existing on the network will be explained and at a later time we will try to explain the CSS and HTML and then enter the PHP programming (server side) and JavaScript (client side) with the creation of databases via phpMyAdmin. All this will be explained through an example website created specifically using a free Bootstrap for simplicity and basic convenience and programming a control panel with login connected to the site via database for inserting images directly from the web by uploading them to the database created with connected phpMyAdmin to the site. Obviously, after entering the world of databases and programming, you can apply this knowledge to any other need for iteration by the user required by the site project. The aim of this study is not to create simple web pages that today can be done easily with WordPress or other easy-to-use software, but for purely educational purposes to explain the use of databases and server and client-side programming to make a dynamic otherwise static site. In summary, this work can be useful for those who want to approach the fascinating world of website programming from the beginning.

Website Development for the Beginners Chhotu Kumar,2021-08-15 The book is about the website development. Which will teach you how to develop a website from the beginning to Advanced level

[HTML, CSS, Bootstrap, Php, Javascript e MySql](#) Olga Maria Stefania Cucaro, 2022-02-07 Questo libro vuole iniziare coloro che vogliono creare autonomamente un sito web, al mondo dei domini e della programmazione legata al web. L'autore ha pensato quest'opera come opera scientifica destinata all'uso didattico e di studio per tutti coloro che si approcciano allo studio della programmazione lato client e lato server. In primo luogo si esplicherà la differenza fra i vari domini esistenti in rete ed in un secondo momento si cercherà di spiegare il CSS e L'HTML per poi entrare nella programmazione PHP (lato server) e JavaScript (lato client) con la creazione di database tramite phpMyAdmin. Tutto questo sarà esplicato attraverso un sito web esempio creato appositamente utilizzando per semplicità e comodità di base un Bootstrap gratuito e programmando un pannello di controllo con login collegato al sito tramite database per l'inserimento delle immagini direttamente dal web caricandole sul database creato con phpMyAdmin collegato al sito. Ovviamente dopo essere entrati nel mondo dei database e della programmazione si potrà applicare queste conoscenze a qualsiasi altra necessità di iterazione da parte dell'utente richiesta dal progetto del sito. Obiettivo di questo studio non è la creazione di semplici pagine web che oggi può essere fatta tranquillamente con WordPress o altri software facili da utilizzare, bensì a scopo prettamente didattico spiegare l'utilizzo dei database e della programmazione lato server e lato client per rendere dinamico un sito altrimenti statico. In sintesi, questo lavoro può essere utile a coloro che vogliono approcciarsi all'affascinante mondo della programmazione dei siti web dal principio.
