288 Chances Brenda J. Otto,2013-10-25 5 minutes—the time it takes to brush your teeth, fry an egg, or pay the electric bill. In any given twenty-four-hour period, we all have 288 chances to take five minutes and just stop—to think, to feel, allow ourselves time to breathe, grab hold of a thought or a word or a feeling, and capture a moment. 288 Chances is a collection of writings, each with a foundation that began in five short minutes. Open, honest, thoughtful words written from the heart, words that will hopefully engage the mind and the spirit as they relate to the simple, everyday feelings and emotions that we all experience over a lifetime. Love, Loss, Trust, Expectation. Just a few of the hopes and fears, joys and disappointments that might otherwise go unspoken, unshared, until we take the time to write them down. Could you set aside five minutes a day to challenge yourself? Challenge yourself to take one random word and write for five quick minutes, without thought to grammar or punctuation—first connecting the bare bones, and then going back and adding some flesh and muscle, so your

words might inspire, entertain, encourage, or comfort someone who might need to hear them today. Everyday life is full of ordinary moments that should inspire us all to be extraordinary. Sharing these moments with others connects us. Take five. And write it down. For more on this book and the author, please visit 288chances.blogspot.com.

Structural Adhesive Joints in Engineering R. D. Adams, 2012-12-06 The intention of this book is that it should contain everything an engineer needs to know to be able to design and produce adhesively bonded joints which are required to carry significant loads. The advantages and disadvantages of bonding are given, together with a sufficient understanding of the necessary mechanics and chemistry to enable the designer to make a sound engineering judgement in any particular case. The stresses in joints are discussed extensively so that the engineer can get sufficient philosophy or feel for them, or can delve more deeply into the mathematics to obtain quantitative solutions even with elastoplastic behaviour. A critical description is given of standard methods of testing adhesives, both destructively and non-destructively. The essential chemistry of adhesives and the importance of surface preparation are described and guidance is given for adhesive selection by means of check lists. For many applications, there will not be a unique adhesive which alone is suitable, and factors such as cost, convenience, production considerations or familiarity may be decisive. A list of applications is given as examples. The authors wish to increase the confidence of engineers using adhesive bonding in load-bearing applications by the information and experience presented. With increasing experience of adhesives in engineering, design will become more elegant as well as more fitted to its products.
