**The Gunsmith #367** J. R. Roberts, 2012-06-26 THE GUNSMITH HAD BETTER PLAY HIS CARDS RIGHT... Men from all over are playing their way west to Iowa, hoping to make a fortune in a roll of the dice or in a backroom game of cards. They're trying to cash in on an unpredictable little lady called Luck—and Clint Adams is no different. But along with big winnings come tough towns like Omaha, pretty saloon owners who need protecting, and crooked lawmen who'd just as soon run a man out of town as let him cut in on their action. Bred to the law of frontier survival, is the Gunsmith up to dealing with the high-stakes challenges of working in the gambling business? OVER 15 MILLION GUNSMITH BOOKS IN PRINT!

*The Trailsman #367* Jon Sharpe, 2012-05-01 The rain is gonna turn red... *Child Emperor Rule in the Late Roman West, AD 367-455* Meaghan A. McEvoy, 2013-05-02 In this book, McEvoy explodes the myth that the remarkable phenomenon of the late Roman child-emperor reflected mere dynastic sentiment or historical accident. Tracing the course of the frequently tumultuous, but nevertheless lengthy, reigns of young western emperors in the

years AD 367-455, she looks at the way in which the sophistication of the Roman system made their accessions and survival possible. The book highlights how these reigns allowed for individual generals to dominate the Roman state and in what manner the crucial role of Christianity, together with the vested interests of various factions within the imperial elite, contributed to a transformation of the imperial image - enabling and facilitating the adaptation of existing imperial ideology to portray boys as young as six as viable rulers. It also analyses the struggles which ensued upon a child-emperor reaching adulthood and seeking to take up functions which had long been delegated during his childhood. Through the phenomenon of child-emperor rule, McEvoy demonstrates the major changes taking place in the nature of the imperial office in late antiquity, which had significant long-term impacts upon the way the Roman state came to be ruled and, in turn, the nature of rulership in the early medieval and Byzantine worlds to follow.

**Structuring Sense: Volume III: Taking Form** Hagit Borer, 2013-10-03 Structuring Sense explores the difference between words however defined and structures however constructed. It sets out to demonstrate over three volumes that the explanation of linguistic competence should be shifted from lexical entry to syntactic structure, from memory of words to manipulation of rules. Its reformulation of how grammar and lexicon interact has profound implications for linguistic, philosophical, and psychological theories about human mind and language. Hagit Borer departs from language specific constructional approaches and from lexicalist approaches to argue that universal hierarchical structures determine interpretation, and that language variation emerges from the morphological and phonological properties of inflectional material. Taking Form, the third and final volume of Structuring Sense, applies this radical approach to the construction of

complex words. Integrating research in syntax and morphology, the author develops a new model of word formation, arguing that on the one hand the basic building blocks of language are rigid semantic and syntactic functions, while on the other hand they are roots, which in themselves are but packets of phonological information, and are devoid of both meaning and grammatical properties of any kind. Within such a model, syntactic category, syntactic selection and argument structure are all mediated through syntactic structures projected from rigid functions, or alternatively, constructed through general combinatorial principles of syntax, such as Chomsky's Merge. The meaning of 'words', in turn, does not involve the existence of lexemes, but rather the matching of a well-defined and phonologically articulated syntactic domain with conceptual Content, itself outside the domain of language as such. In a departure from most current models of syntax but in line with many philosophical traditions, then, the Exo-Skeletal model partitions 'meaning' into formal functions, on the one hand, and Content, on the other hand. While the former are read off syntactico-semantic structures as is usually assumed, Content is crucially read off syntactico-phonological structures.

*Shostakovich* Laurel Fay, 1999-11-25 For this authoritative post-cold-war biography of Shostakovich's illustrious but turbulent career under Soviet rule, Laurel E. Fay has gone back to primary documents: Shostakovich's many letters, concert programs and reviews, newspaper articles, and diaries of his contemporaries. An indefatigable worker, he wrote his arresting music despite deprivations during the Nazi invasion and constant surveillance under Stalin's regime. Shostakovich's life is a fascinating example of the paradoxes of living as an artist under totalitarian rule. In August 1942, his Seventh Symphony, written as a protest against fascism, was performed in Nazi-besieged Leningrad by the city's surviving musicians, and was triumphantly broadcast to the German troops, who had been bombarded beforehand to silence them. Alone among his artistic peers, he survived successive Stalinist cultural purges and won the Stalin Prize five times, yet in 1948 he was dismissed from his conservatory teaching positions, and many of his works were banned from performance. He prudently censored himself, in one case putting aside a work based on Jewish folk poems. Under later regimes he balanced a career as a model Soviet, holding government positions and acting as an international ambassador with his unflagging artistic ambitions. In the years since his death in 1975, many have embraced a view of Shostakovich as a lifelong dissident who encoded anti-Communist messages in his music. This lucid and fascinating biography demonstrates that the reality was much more complex. Laurel Fay's book includes a detailed list of works, a glossary of names, and an extensive bibliography, making it an indispensable resource for future studies of Shostakovich.

**Fractional Programming** I.M. Stancu-Minasian, 2012-12-06 Mathematical programming has known a spectacular diversification in the last few decades. This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created. To write a monograph dedicated to a certain domain of mathematical programming is, under such circumstances, especially difficult. In the present monograph we opt for

the domain of fractional programming. Interest of this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and/or economical functions, for example cost/time, cost/volume, cost/profit, or other quantities that measure the efficiency of a system. For example, the productivity of industrial systems, defined as the ratio between the realized services in a system within a given period of time and the utilized resources, is used as one of the best indicators of the quality of their operation. Such problems, where the objective function appears as a ratio of functions, constitute fractional programming problem. Due to its importance in modeling various decision processes in management science, operational research, and economics, and also due to its frequent appearance in other problems that are not necessarily economical, such as information theory, numerical analysis, stochastic programming, decomposition algorithms for large linear systems, etc., the fractional programming method has received particular attention in the last three decades.
